#### REPORT

OF THE

#### COMMITTEE OF VISITORS.

To the Justices of the County of Berks in Quarter Sessions: the Council of the Borough of Reading: and the Justices of the Borough of Newbury.

THE COMMITTEE of VISITORS of the MOULSFORD
ASYLUM

#### REPORT

That it is amply sufficient for the proper accommodation of those for whom it was built, and that besides such there are now resident in it 4 non-pauper patients and 30 paupers (20 males and 10 females) from the County of Surrey. These latter being received under the agreement mentioned in the report for 1882.

The state and condition of the Asylum appear to be very good; but in consequence of the occurrence of an abnormal number of cases of diarrhœa and some of erysipelas, the Committee, the water-supply having been shown by analysis to be excellent, is inquiring whether the sewers and places connected with them are perfectly

ventilated. It will probably be found prudent to adopt in the older part of the Asylum a similar method of ventilation to that which is in use in the recent extensions, and is comparatively new. This will be done at a cost of about £200.

The Visitors are well satisfied with the management of the Asylum, with the conduct of its officers and servants, and with the care and treatment of the patients. It has been thought right to raise the salaries of Dr Barron, the Assistant Medical Officer, from £150 to £175 a-year, and of Mr Nicholls, the Clerk and Steward of the Asylum, from £140 to £160 a-year. Dr Barron has held his office nearly seven years.

In the last report an apprehension of a failure in the water-supply was noted, and inquiry on the subject was promised. In the end it appeared essential to the welfare of the Asylum, both for ordinary purposes and as a precaution against accidental fire, to obtain a more ample supply; a boring 81 feet in depth has been sunk by Messrs Le Grand and Sutcliffe of the Magdala Works, 100 Bunhill Row, London, E.C., and attachments made to it from the pumps.

Sanction for these works was obtained from the various Bodies in Union on an occasional report during the year.

The whole cost was £203 13s. 11d.; the effect of the work is satisfactory. The assistance rendered in the inquiry by the Rev. James Clutterbuck, of Long Wittenham, was very useful, and ensured for him the warm thanks of the Committee.

In view of the possibility of accidental fires, an expenditure of £74 12s. Od., has been made in the purchase of additional hose, fire-buckets, and small Hand Fire Pumps. Of the need for these mention was made in the occasional report before alluded to.

The Greenhouse, upon which it was proposed in the 1882 report to spend the balance then in hand of the Extensions Fund, viz.: £181 7s. 4d., has been erected at a cost exceeding the balance of £34 2s. 8d.

The cost of "Repairs, Renewals, and Improvements" for the year to the 1st October, 1883, amounted to £1,516 12s. Od.; this amount includes an item of £151 8s. 3d. for Boring, &c., in connection with the water-supply.

Lodging-money for the year to the 1st October, has been earned from the Borough of Reading to the amount of £13 4s. Od. This and part of the receipts from the Surrey and non-pauper patients, viz.: £420 18s. 5d. appropriated as lodging-money, have been applied in aid of the Repairs and Improvements Fund.

The principal Repairs, Renewals and Improvements executed for the same period are:—The Ground Floor ceilings of Male Ward No. 1, cleaned and whitened, and the walls lime-whited throughout where wanted. The First Floor of Male Ward No. 3, similarly treated. The walls of the staircases to Male Wards, Nos. 2 and 3, repainted to the usual height. The Dayrooms, Corridors, Dormitories, Bathrooms, Lavatories, Sculleries, &c., of the Female Wards, Nos. 5, 6 and 7, cleaned, whitened, lime-whited, painted and varnished throughout. The

Dormitories and Wards for occasional use on the Second Floor on the male and female sides cleaned, whitened, lime-whited, painted, and varnished throughout. The Dormitories of Wards, Nos. 1, 2 and 3, on the female side, cleaned and whitened, and the woodwork varnished. A new Kitchener put in the large kitchen fireplace. A new wrought-iron welded boiler in the Kitchen range at the Medical Superintendent's House. A new well, bored 81 feet deep, 7½ inches diameter, and the large Steam Engine which works the pumps attached to the boring-tube and repaired. The small Steam Engine and the Donkey-Pump repaired, and a new small pinion wheel put to the pumping gear. Two Heating Apparatus Boilers removed for repairs, but being found much worn, they are now being replaced by two new ones. A bench of 3 new Clay Retorts at the Gas Works. The strained wire fence, formerly placed at the north-eastern boundary of the Asylum grounds, removed and set up on the south-west side of the road leading to Little Stoke Ferry. At the Star Terrace Cottages the outside wood and iron work painted. One Wash-house floor re-laid with blue Staffordshire paving bricks, jointed with Portland cement, and York stone sills substituted for oaken ones in two washhouses. The pointing of the walls around the Airing-Courts, left unfinished last year, completed this summer. A Greenhouse built, and for easy access thereto a small gate placed in the dwarf wall of the Gardener's cottage garden.

The patients now (21st December, 1883) on the Books of the Asylum are:

				M.	F.	TOTAL.
From Unions in	Berkshire	. , .		141	200	341

#### REPORT

OF THE

#### RESIDENT PHYSICIAN AND MEDICAL SUPERINTENDENT.

To the Committee of Visitors of the Berks, Reading, and Newbury Lunatic Asylum.

GENTLEMEN,

The Medical Superintendent begs to present his Thirteenth Annual Report upon the condition and management of the Asylum, which will comprehend an epitome of the various noteworthy circumstances and changes amongst the inmates that have occurred during the year 1883, and to it will be annexed the customary series of statistical tables which have been compiled, with some slight modifications, in accordance with the plan recently recommended by the Medico-Psychological Association.

On the 1st of January, 1883, the Asylum contained 500 patients, of whom 222 were males and 278 females; throughout the year 100 were admitted, 35 were discharged recovered, 8 relieved, 1 not improved and 52 died, leaving 504 in residence on the 31st of December, of whom 218 were males and 286 females, the numerical result being an increase of four in the number resident at the close of the year. This trivial increase resulted from an increase of eight amongst the females, which was, however, counter-balanced by a decrease of four in the number of males. As regards the chargeability of the inmates at the end of the year, 344 were chargeable

to Unions in the County of Berks, 86 to the Borough of Reading, 35 to the Borough of Newbury, and one to Brentford Union, 30 to Brookwood Asylum, 3 to the County of Berks, and 5 were private patients. On comparison with the corresponding figures of the previous year the result is an increase of 8 in those chargeable to Berkshire Unions, a decrease of 1 chargeable to Reading, 2 to Newbury, 2 to out-county Unions and an increase of 1 in the number of private patients. Eight of those admitted were transferred from other asylums, of whom 3 were brought from Brookwood to fill up vacancies that had occurred, and the remainder, with the exception of one private patient, from various asylums through becoming chargeable to Berkshire Unions. In regard to those who had been inmates of Union Workhouses prior to admission, of whom there were 25 admitted, there has been a diminution of 11 as compared with the number for the previous year. As regards the duration of residence in those Institutions, 7 had resided less than a week, 2 under a month, 2 under 6 months, 4 not exceeding 12 months and the remainder, 10, for various periods extending from one year up to sixteen years. Only one Criminal lunatic was admitted under warrant from the Secretary of State. She had been convicted of three acts of theft and sentenced to six months imprisonment, which will expire in February. One of the males admitted, lately a Sergeant in the Commissariat and Transport Corps, whose mental illness had supervened upon enteric fever contracted during the Egyptian Campaign, was brought under escort from Netley Hospital under an order signed by an Under Secretary for War according to the provision made in the Army Act, 1881, Sec. 91.

Ten of the admissions were relapsed cases that had

been previously inmates of the asylum but none of those discharged recovered during the year were included in this number. As regards the length of time which had elapsed since those cases left the asylum, one had been away for 10 years, one nearly 7, one 5, two about 3 and two nearly 6 months, which was the shortest period recorded.

In regard to private patients, four inmates of this class were resident in the asylum at the beginning of the year, four were admitted during the year, two were discharged recovered and one relieved, so that there are now five private patients in the asylum, of whom one is a male and four females.

There is no striking variation in the general characteristics of the admissions to record. As regards the prospect of recovery only 27 were reckoned to be curable, 25 doubtful, and 48 quite incurable. The favourable anticipation in regard to recovery has up to the close of the year only been realised in the case of twelve of the admissions. Suicidal impulse of varied intensity had been manifested prior to admission by 37 cases, and of these 24 had made actual attempts at suicide. In regard to the means used by the latter to accomplish their fatal intentions, 4 attempted by hanging, 5 by drowning, 7 by cutting the throat, 2 by strangulation, 3 by precipitation, 1 by stabbing, 1 by cutting the tongue and 1 by self-mutilation. In the course of the year 9 attempts at suicide occurred in the asylum, but were all happily frustrated. The means chiefly adopted was by hanging or strangulation and in one case by cutting the throat with a pair of scissors. number of those suicidal cases and the persistent determination of many of them to accomplish self-destruction entailed great anxiety and unceasing vigilance

on the part of the attendants, who have now the gratification of witnessing two of the worst cases approaching a state of convalescence.

The prolonged and obstinate refusal of food so as to require feeding by the stomach-pump was recorded regarding 25 cases, the majority of whom required the operation only a few times; but two were so persistent as to require it, one on 114 and the other on 152 occasions. Altogether the artificial administration of food in this manner was resorted to on 503 occasions throughout the year.

The proportion of those reported or discovered to be of faulty habits was somewhat less; 43 being the number recorded as being either wet, filthy, or destructive, about one-half manifesting all of those propensities.

In regard to the bodily health and condition of the admissions, only 11 were after examination found to be in good bodily health and condition, 49 were in indifferent health, of whom 20 were in ordinary condition and 29 more or less physically reduced, 26 were in feeble health, 14 in very feeble health and all exhibiting various degrees of reduced condition which in eight instances extended to a marked state of emaciation. It may, however, be mentioned that it was a source of much gratification to the Medical Officers that three of the worst of these cases, who, on admission and for some time after, were in a very critical state, ultimately regained health and strength, and were discharged recovered with very grateful expressions for the treatment they had received. Two of those were females, one the subject of heart disease and the other affected with pneumonia, for which she had been confined to bed for three weeks and had

eaten nothing for several days. The male case had likewise refused food for seven days and was affected with congestion of one lung. One female who had also refused food for a week and was admitted in a very feeble, emaciated state, the result of starvation and hyperlactation, although fed immediately and regularly afterwards never rallied but died twelve days subsequent to admission. In her case the vital powers had reached too low an ebb before the administration of nourishment was commenced. In regard to the physical diseases noted on admission, disease of the heart as usual heads the list, 23 cases of cardiac affection having been recognised and 12 of ordinary pulmonary disease, including several cases of pneumonia. Six cases were affected with hernia, 8 with varicose veins, 2 with ulcers, one with synovitis, one with scabies and one with spurious elephantiasis. common forms of cerebro-spinal disease usually allied with mental alienation were represented by 11 cases of Paralysis, 5 of General Paralysis, and 20 of Epilepsy, the latter being an unusually large proportion of the admissions affected with this generally incurable disease. Three cases were admitted with self-inflicted wounds of whom 1 male had an open wound four inches in length from cutting his throat with a razor, one boy who had cut the point of his tongue severely with a knife, and one severe case of self-mutilation inflicted by the patient while an inmate of the workhouse. Rather more than the usual proportion of cases were admitted affected with senile debility incidental to advanced life, and of this class 11 were between 70 and 80 years of age and one over 80.

In regard to the form, cause and duration of insanity noted on admission, 23 were affected with Mania, 25

with Melancholia, 10 with Monomania, 36 with Dementia, 4 with Idiocy, and 1 with Congenital Imbecility. Upon those figures it may be remarked that the proportion of cases of dementia, which were nearly all of the secondary or incurable type, continues large; but it is an unusual circumstance for the cases of mania to be exceeded in number by those of melancholia. In respect to the duration of insanity prior to admission, 35 were cases of first attack, and admitted within three months of the advent of mental disease, 16 also of first attack within twelve months, 17 over twelve months, and 27 who had experienced one or more attacks, but whose existing attack had not exceeded twelve months. As regards the causes of insanity 15 were of a moral and 59 of a physical character, but the remainder were unascertained. The cause most frequently enumerated in the former class was religious excitement, to which five cases were attributed. Amongst the physical causes Epilepsy stands first in order of frequency, 15 cases having been ascribed to that disease. Hereditary predisposition ranks next with 12, intemperance 10, predisposition from previous attack 5, and the puerperal state 2. Single cases of amenorrhoea, enteric fever, hyperlactation, injury of head, pneumonia and scarlatina are also comprehended in this class. Special investigation on the prevalence of hereditary predisposition to insanity on the part of those admitted, shows that 44 cases were hereditary, 28 not hereditary, and in regard to 28 the fact could not be ascertained. As regards the result at the end of the year of the 1883 admissions, 12 were discharged recovered, 4 relieved, 14 died, and 70 remained.

The recoveries of the year, amounting to 35, show an excess of 5 over the number recorded during the previous year and yield a percentage of 35 on the admis-

sions, and 38 if transfers are excluded. This figure has only been exceeded twice in the annals of the asylum, viz., in 1872 and 1879. Amongst the recoveries a brief allusion may be made to two females who were discharged, one of whom had been nearly ten years an inmate of the asylum and had been employed in the kitchen. She left to start house-keeping for one of her sons who had provided her with a home, and the accounts received regarding her have been very satis-The other female who had been an inmate factory. close on four years, and during nearly the whole of that period had been suicidal, violent, turbulent, and most vituperative, suddenly developed a complete change in her mental state and conduct. At her urgent entreaty and with fervent promises of good conduct she was discharged on probation and has since done well. Although there were several other cases in regard to whom considerable apprehension was entertained, it is a gratifying circumstance that not one case out of the number discharged recovered has up to the present date been brought back to the asylum. As regards those discharged relieved or otherwise, one male discharged not improved and three males discharged improved, were transferred to other asylums through becoming chargeable to out-county Unions. Another male patient, who was suspected of malingering when admitted, having either recovered or given up shamming insanity, was re-transferred to Brookwood and discharged relieved. Four females were discharged relieved, two of whom were permitted to leave at the urgent request of their relatives, who were anxious to give them a trial at home, one who had inherited considerable property was removed to be placed as a single patient in a private house under the Court of Chancery, and one

private patient removed to Bethlem Hospital, but having been rejected, was brought back as a pauper chargeable to Hungerford Union.

The deaths that occurred during the year amounted to 52 in number, being 3 less than that for the preceding year, and yield a percentage of 10.3 upon the daily average resident and 8.6 upon the total number under treatment. This rate of mortality is almost identical with that of similar institutions throughout England, the corresponding figures based upon an average of ten years given in the tables issued by the Commissioners in Lunacy in their last report being 10:35 and 8:05. As regards the causes of death about one-half of the mortality arose from various forms of cerebro-spinal disease, of which there were 8 cases of Epilepsy, 8 of General Paralysis, 4 from Exhaustion from Mania and Melancholia, 6 of Paralysis and one of Syphilitic Brain Disease. In 14 cases death was due to thoracic disease, comprising 1 case of Asthma, 4 of Cardiac Disease, 6 of Phthisis Pulmonalis, 2 of Pneumonia and one of Rupture of the From abdominal disease six deaths occurred, Heart. four of which were comprised under Diarrhœa, one from Albuminuria and one from Menorrhagia and Caries of Lumbar Vertebræ. Of other diseases there was one case of Epithelioma, one of Senile Gangrene, and three of Senile Decay.

In only one instance the circumstances connected with death necessitated a Coroner's Inquest. This was the case of an old woman, 76 years of age, known to be the subject of organic heart disease, but who at the time of the fatal seizure was apparently in her ordinary health. On the evening of the 19th of April, as the attendant was preparing to undress her for bed, she suddenly fainted, and before medical aid arrived was found to have

expired. A post-mortem examination subsequently made disclosed the cause of sudden death to have been rupture of the right auricle of the heart, and effusion of blood into the cavity of the pericardium. At the inquest afterwards held a verdict of death from heart disease was returned.

As regards the general health of the inmates a few cases of erysipelas of no great severity occurred, chiefly during the first four months of the year, while during the months of May, June and July, diarrhea of an intractable type was prevalent in some parts of the asylum. At this juncture the spare room adjoining the Surgery was brought into requisition for two months, and was found of much benefit in the treatment of several of the worst cases.

With a view of elucidating the cause of the diarrhoea epidemic two samples of water derived from the original well in the store-yard and from the well at the farm were submitted for analysis\* to the county analyst, Professor Donkin, who reported that both wells yield water of much the same character and purity, free from contamination by sewage matter and in his opinion quite fit for drinking and all domestic uses.

About the usual average of unimportant casualties occurred in the course of the year, and four cases of fracture. Two of the latter were fractures of the femur, which happened during the night through the patients, who were both over 80, falling out of bed. The remainder were two cases of fracture of one of the bones of the forearm, the radius in one case and the ulna in the other, and one of the lower jaw, which were all due to accidental falls. There was also a case of dislocation at

<sup>\*</sup> For particulars of Analyses see page 80.

the shoulder-joint in the person of a paralytic patient, from an accidental fall in the day-room. The fractures all united after the customary surgical treatment, and the dislocation was reduced in the usual manner.

There is no noticeable variation in the general treatment of the patients to record. Industrial occupation has been strenuously promoted, and the usual means of recreation have been provided. During the summer months from 75 to 80 male patients were usefully employed upon the grounds, in the garden or on the farm.

The periodical fortnightly entertainments have been regularly held in the recreation hall, and occasionally when the weather permitted, a dance with tea upon the lawn in front has proved a very enjoyable diversification, greatly appreciated by those whose industrious habits and good conduct had entitled them to the privilege. Occasional theatrical performances by members of the staff have, as formerly, proved a source of much gratification to the inmates. The representation of Byron's burlesque of Aladdin, which was played by the asylum company at the commencement of the year as the principal annual entertainment, was pronounced by the extra-mural critics as being an amateur performance of very superior merit. An increased supply of newspapers and periodicals has been issued to the wards, which, while greatly appreciated by the more intelligent class, have had a tranquillising effect amongst the excited and turbulent.

Amongst the improvements effected during the year the erection of a small greenhouse with potting-shed attached, by Messrs Lascelles and Co., has already enabled the gardener to supply the wards with an attractive assortment of flowering plants. To rectify the failure in the water-supply alluded to in last year's

report, a tube-well 9 inches in diameter, the inner or supply tube being  $7\frac{1}{2}$  inches in diameter, was put down in summer by Messrs Le Grand and Sutcliff to a depth of 81 feet; the green sand formation being reached at a depth of 46 feet. An ample supply of excellent water was procured, the tube having been tested by hand pump, and found capable of yielding about 32,000 gallons per day of ten hours. Since the connection was made between the existing pumps and the tube-well, there has been no further deficiency in the supply of water, which has been sufficient for all the requirements of the asylum. The existing appliances for the extinction of fire have been augmented by the purchase of 16 forty-feet lengths of patent canvas hose with fittings and hand-pipes, several dozen of fire buckets, and three of Merryweather's hand-pumps. The principal female airing-court has been much improved by alteration and widening of the paths and the planting of some additional shrubs.

The provision of a handsome uniform for attendants and servants of both sexes, free of cost, has materially contributed to improve their personal appearance, but as yet has had no appreciable effect in diminution of the frequent changes which continually recur, and which prove so inimical to the welfare and comfort of the patients, and subversive of the general discipline.

The asylum was visited and inspected on the 28th of September by two of the Commissioners in Lunacy, who, in their report, state that they could give a satisfactory report of the state of the wards; that the patients were for the most part quiet and orderly, and that they considered the asylum to be carefully and efficiently managed.

In concluding this report, the Medical Superintendent would respectfully tender his thanks to the Committee of Visitors; and in acknowledging the services of his fellow officers, he would express his regret at the prolonged illness of the Housekeeper, Mrs Horton, and again testify to the very efficient assistance received throughout the year from his medical colleague, Dr Barron.

I have the honour to be,

Gentlemen,

Your obedient servant,

ROBERT BRYCE GILLAND, M.D.,

Medical Superintendent.

Moulsford Asylum, 18th January, 1884.

#### TABLE IIA.

Showing the Admissions and Recoveries of Persons from the 30th of September, 1870, to the present date Dec. 31st, 1883.

(Thirteen years and three months.)

	Males.	Females.	Total.
Persons admitted during the thirteen years and three months	648	709	1357
Persons* discharged recovered during the same period being 26.2 per cent. of persons admitted	158	198	356
Of whom were re-admitted relapsed	24	49	73
Recovered persons who have not relapsed	134	149	283
Relapsed persons discharged recovered	11	17	28
Net† recovered persons, being 22.9 per cent. of persons admitted	145	166	311

<sup>\*</sup> Persons, i.e., separate persons in contradistinction to cases which may include the same individual more than once.

Re-admission applies only to re-admission into this Asylum.

 $<sup>\</sup>dagger$  i.e., Recovered persons sane at the present time so far as the Asylum statistics show.

### CHAPLAIN'S REPORT.

To the Committee of Visitors of the Moulsford Lunatic Asylum.

GENTLEMEN,

In accordance with the General Regulations, I beg to submit my Fifth Annual Report as Chaplain of this Institution. My journal will show you that the Sunday Services and the Morning Prayers have been duly performed during the past twelve months. The Wards have also been regularly visited by me. I have endeavoured as far as lay in my power, both by my teaching in the Chapel and by friendly conversation with the patients in the Wards, to give some comfort and hope to those who within these walls are entrusted to my spiritual charge. After several years now of experience I can say that I feel an increasing interest in my work, for, although it may not afford much new matter for a Report like this, yet it is constantly presenting some new points of individual interest.

The behaviour in Chapel has been most devout, and I have always received a warm and kindly welcome from those patients who were able to receive my ministrations. May I once more express the hope that your Committee may be able to grant a small Organ for the Chapel Services. Our present Harmonium is sadly inefficient for the size of the building, and the fact that it has to be carried to and fro from the Chapel to the Dining Hall does not tend to improve it. I venture to think that the words of Horace in praise of wine would have been far more true had he substituted music, when he says:

"Neque

Mordaces aliter diffugiunt sollicitudines."

"Gnawing cares thus only flee away."

The attendance of the patients on Sundays has varied from 253 to 287 in the morning, and in the evening from 235 to 282.

The Wards are now, I understand, well supplied with Bibles, Prayer and Hymn-Books.

The Holy Communion has been administered every month; generally about 25 patients attend.

The Chapel was very nicely decorated for the Harvest Festival. The Sermon at the Evening Service was most kindly preached by the Rev. Richard King, who had been for many years Chaplain of the Prestwich Asylum, near Manchester. He expressed himself afterwards as being very pleased indeed with the Singing and the behaviour of the Patients. He was particularly struck by the hearty manner in which the Service was rendered.

The deaths of 52 patients have been reported to me, of whom 36 have been buried in Cholsey Churchyard. One of the patients, Elizabeth Lambourne, was in accordance with the New Burials Act, interred with the Service of the Roman Catholic Church.

I have to inform you that the Rev. T. J. M. Townsend has returned to his living in Lincolnshire, and that the Rev. F. W. Agassiz, formerly one of H.M.'s Chaplains to the Forces, has accepted the post of Assistant-Curate of Cholsey.

In closing this Report I beg to offer my sincere thanks to all who have shown me any kindness and who have given me help and assistance in my work.

I have the honour to be, Gentlemen,

Your obedient servant, R. W. PERRY CIRCUITT, Chaptain.

CHOLSEY VICARAGE, December 20th, 1883.
